

Brief biography
Sevilia Sunetchiieva

Position within NDTonAIR: ESR 5
Host Institution: KU Leuven (BEL), Leuven, Belgium

My name is Sevilia Sunetchiieva and I am from Ukraine. It is an exciting adventure in my life to be a part of the European Training Network NDTonAIR.

Since my childhood, I have been wondered how different devices are operating and repaired. After secondary school graduation, I knew that my passion is linked to aviation. In 2009, I had enrolled at the National Aviation University in Kyiv where I obtained my Bachelor's and Master's Degrees. During my Bachelor studies, I started to work at a NDT research laboratory in my institution where I was step by step professionally growing into understanding and application of different methods and systems. I have presented my achievements at various conferences within Ukraine.

During my Master studies, I was actively conducting research in the context of my Master thesis in the field of NDT of composite materials and presented new method and system for statistical data processing using the ultrasonic technique. Thanks to this experience, I have gained practical knowledge in utilizing ultrasonic transducers, different electronic equipment, and signal post-processing.

Right after obtaining my Master's Degree, I was offered a position as a Metrology engineer in American daughter company Sumix Ukraine which produces the equipment for fibre optic industry.

Besides my studies, I like to attend art galleries, theatres, also traveling and exploring different cultures of visiting cities. As to my hobbies, I am practicing ballet dancing, watercolour, and oil painting and I am a passionate reader.
